RETAIL FUEL

WHO ARE SWITCH

Great People Delivering Exceptional Results describes our approach to business and in many respects captures the essence of who we are.

Switch was formed in mid 2012 with the vision of providing high quality, specialised project management, design and construction management services to the broader Retail and Commercial Construction industry.

Since our inception, our focus has always been on providing end to end solutions for clients and as such we pride ourselves in working closely with clients to achieve this.

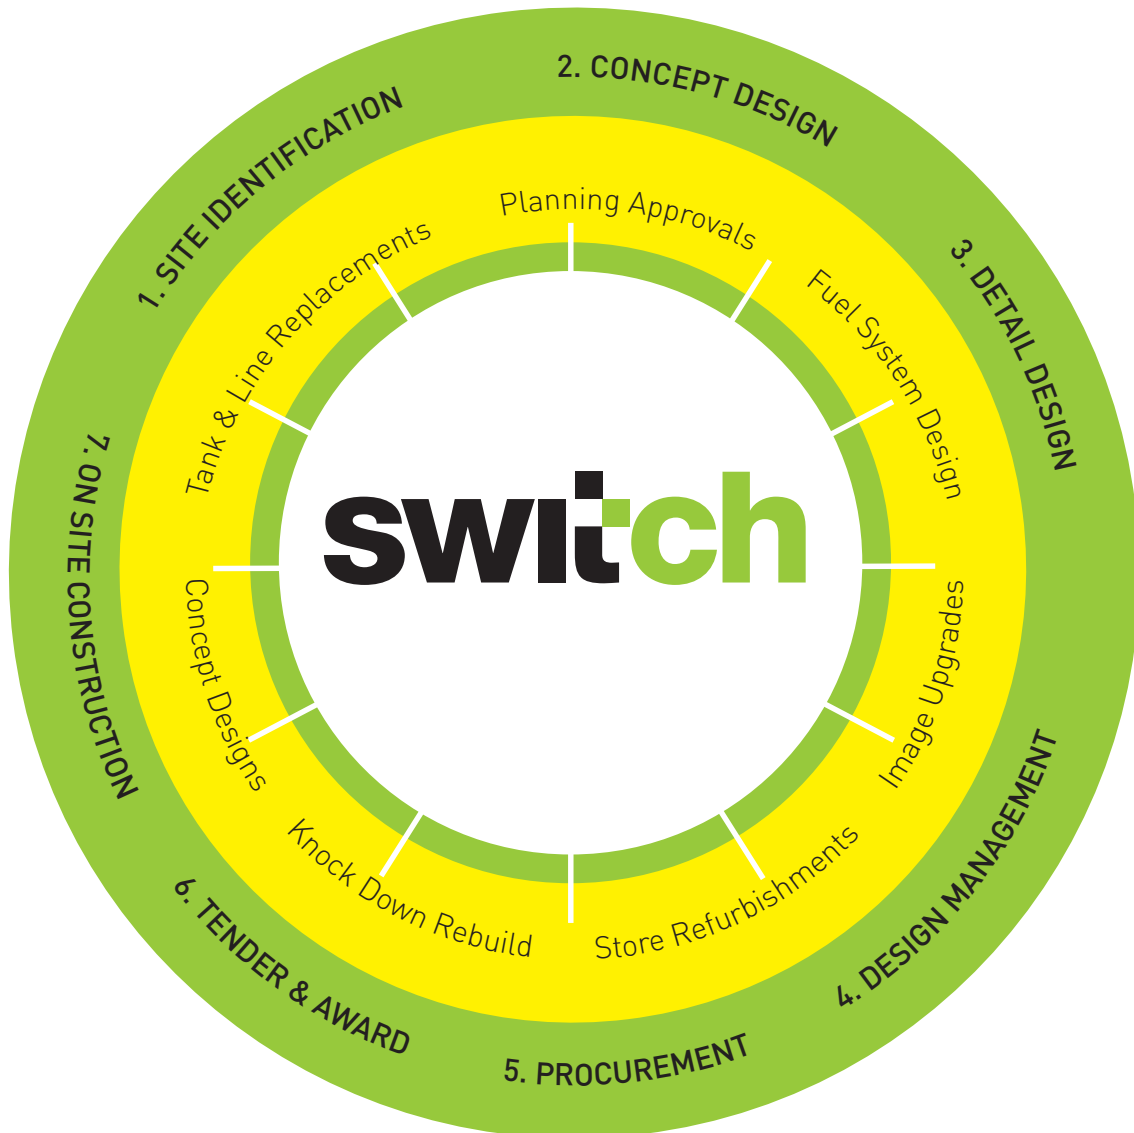

Switch are unique in our service offering as we are not just office based project managers and designers, and likewise we are not only based on site swinging a hammer. As registered dangerous good consultants, experienced project managers, qualified engineers and registered master builders, we are able to work with clients in the early stages of project development and also provide the essential delivery muscle of being a commercial builder in our own right.

SCOPE OF SERVICES

With experience across the entire project life cycle the team at Switch are able to take your project from an idea into reality.

Our expertise is spread across the following project phases:

Whether it is client side project & design management services or an end to end solution where Switch are also the builder, we are able to manage all facets of the retail fuel development cycle.

GREAT PEOPLE

- Project Managers
- Engineers
- Design Drafting
- Foreman / Site Supervisor
- Graphic Designer
- Administrator

New Build CEXP Clyde (Vic)

Project Info

Client: Coles Group Property Developments

Project: New PAD site service station at Clyde, VIC

The challenge: Designing, tendering, and project managing the construction of the PAD site safely and in a short time frame with a clearly defined opening date coinciding with the adjacent supermarket.

Skills: Project and Design Management

“ Super smooth build guys...
Pleasure to work with you... Well
done! (Coles Express new build
at Clyde in Victoria) ”

**Michael Salt, Retail Area Manager,
Coles Group Property Developments
Linked In, 10/12/2015**

The Outcome

With the shopping centre complex nearing completion within months, Coles Group Property Development engaged Switch to ensure that their key fuel offering would be celebrating a site opening in conjunction with its supermarket. From a blank page in late June, Switch built a project team that took the project

through design, tendering, and then construction, resulting in the project opening in early December as planned.

Within 5 months from a blank canvas, Coles Express Clyde was delivered without incident, under budget and on time.

Puma Fuel System Upgrades Program Nationwide

Project Info

Client: Puma Energy

Project: Pump replacement and fuel upgrade program

The challenge: Upgrade of 60 sites in less than 5 months while keeping sites at least 50% operational throughout the works. Ensuring safety is front of mind due to the high risk nature of works and keeping contractors, site staff and customers safe at all times.

Skills: Project management, Program management, Design, Construction, Asset management, Health & safety.

The Outcome

Looking to breathe new life into an existing network, the upgrade works on each site required a significant change to the UPSS. Over a 4 week period per site, Switch in conjunction with a number of specialist fuel system contractors upgraded almost all elements of the fuel system

from fill point through to dispensers. Throughout the program, all sites remained live to the customer and resulted in sites being upgraded to have all products at all filling positions whilst ensuring compliance with current AS1940 standards.
